Cases

10. Conclusion &
Team

1. Project Overview

1 Title

- Project: Indore Urban Development Dashboard
- Tagline: "Smart, Data-Driven Urbanization for Indore"
- Team Name: Code Slayer

2 Your Information

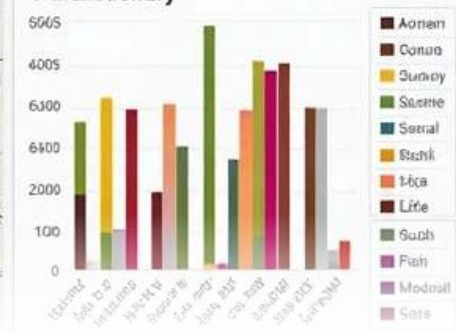

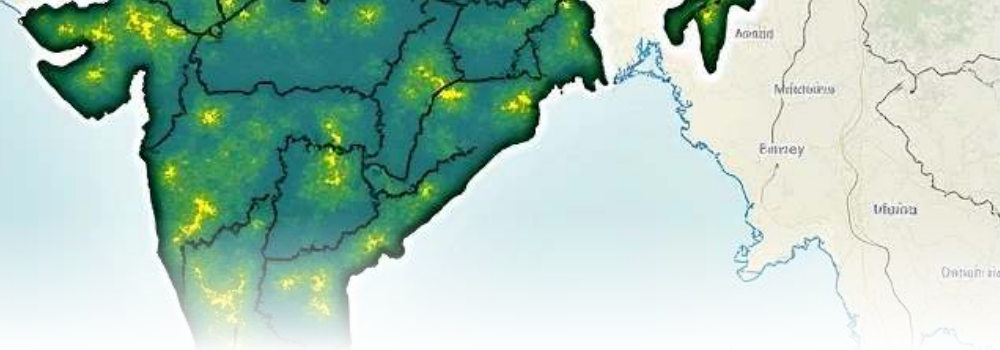

- BY TEAM - CODE SLAYER

2. Problem Statement

Indore is India's cleanest city but faces rapid urban growth, waste, reduced green space, pollution, and infrastructure stress. Urban planners need a holistic, real-time, and visual dashboard to support data-driven decision-making and public engagement.

3. Solution Overview

A web-based Urban Development Index (UDI) Dashboard for Indore.

1

Combines satellite data (NDVI, NDBI, LST, Nightlights)

2

WorldPop population

3

Custom UDI calculation and scenario modeling tools.

Users can visualize spatial data, interactively inspect hotspots, and simulate policy interventions.

4. Data Sources and Indicators

Landsat 8/9 Surface Reflectance
(for NDVI, NDBI, LST)

VIIRS Nightlights

WorldPop Population Density

MODIS Land Surface Temperature
(if used)

Key Indices:

NDVI (greenness)

NDBI (built-up)

LST (surface temp)

Pop

NTL (nightlights)

6. App Features

Map dashboard:
Select year/layer

Click on any
location to view
index value (0-1,
decimals!)

Colorbar/legend
adjusted to 0-1
for all indices

Layer selection: UDI,
Population, LST, NDVI, NDBI,
Nightlights

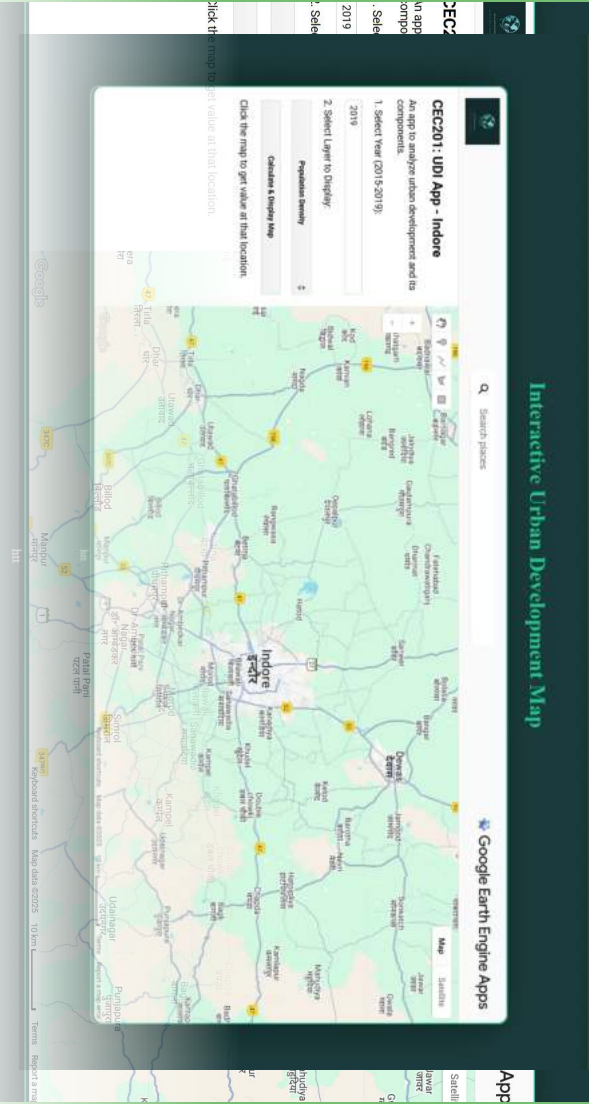

Robust error handling for no-
data/cloud

7. Screenshots (Map & Dashboard)

Key panels

Map, layer selector, click result, legend, "Scenario Modeling" section

8. Impact & Use Cases

1 For municipal planners

Track heat, growth, green cover, and nightlight hotspots.

2 For public/citizens

Visualize city trends, enable open civic discussion.

3 Future expansion

Replicate for other cities, include more environmental, social layers.

9. Conclusion & Team

Summarize: "Towards a cleaner, greener, smarter Indore with interactive spatial analytics."

ALI HUSSAIN KHAN,

AKSHITA CHOUHANI

Thank you, Q&A.
